

Q37. In a search system, when search was first performed under condition A, there were 5,000 search results. When further narrowed down with condition B, 30% of these search results remained. If search first performed under condition B produces 10,000 search results, what percentage will remain when these are further narrowed down with condition A?

a) 15

b) 30

c) 35

d) 60
