

Q76. Which of the following is an appropriate statement concerning a radar chart?

- a) A bar graph and a line graph are combined together to graphically show the ratio of the cumulative total of each item to that of all items, thereby indicating important management items.
- b) Relations between many causes and a specific effect are systematically represented in a fishbone-like form, thereby clarifying what kinds of causes are associated with a single effect.
- c) The degree of attainment of the benchmarking goal is plotted on the radial axis which corresponds to each item. All such plotted points are connected by a line, thereby making a comparison of overall balance.
- d) The schedule and actual achievement record during the execution period are shown, for each job, in a bar graph.
