Q58. When the system development division and the operations division are separately organized, which of the following is an appropriate method for ensuring that the transition from development to operation proceeds smoothly and efficiently?

a) After completion of the operation test, the development division explains the system specifications and operation methods to the operations division.

b) In order to improve the efficiency of the operation test, the operation test should be performed only by the operations division without the participation or assistance of the development division.

c) The development division conducts the operation test, prepares the operation manual, and then hands over the system to the operations division.

d) The operations division participates actively in system development to provide assistance from the viewpoint of operability.
