Q63. User *A* issues the command as follows:

```
UPDATE cust_orders
SET id = 200
WHERE id = 1
```

Then user *B* issues this command as follows:

```
UPDATE cust_orders
SET id = 300
WHERE id = 1
```

User *B* informs you that his/her UPDATE statement seems to be hung.   Which of the following is a possible solution that you can find?

a) Ask user *A* to commit the transaction.
b) Ask user *B* to abort the statement.
c) Ask user *B* to commit the transaction.
d) No action is required.
